

at least one determination that the at least one application, the at least one content item, or a combination thereof has been at least partially or substantially completed at the at least one level of difficulty; and

a presentation of information associated with the at least one point of interest.

**63.** A method of claim **54**, wherein the (1) data and/or (2) information and/or (3) at least one signal are further based, at least in part, on the following:

at least one determination that at least one device has approached the at least one point of interest to within a threshold proximity; and

at least one determination of at least another difficulty level based, at least in part, on another proximity to at least another point of interest,

wherein the at the least another difficulty level is progressively based, at least in part, on the at least one difficulty level.

**64.** An apparatus comprising:

at least one processor; and

at least one memory including computer program code for one or more programs,

the at least one memory and the computer program code configured to, with the at least one processor, cause the apparatus to perform at least the following,

determine a proximity of at least one device to at least one point of interest; and

determine at least one difficulty level associated with at least one application, at least one content item, or a combination thereof based, at least in part, on the proximity.

**65.** An apparatus of claim **64**, wherein the apparatus is further caused to:

determine utilization information for the at least one application, the at least one content item, or a combination thereof with respect to at least one user,

wherein the at least one difficulty level is further based, at least in part, on the utilization information.

**66.** An apparatus of claim **62**, wherein the apparatus is further caused to:

process and/or facilitate a processing of the utilization information to determine at least one skill level associated with the at least one user,

wherein the at least one difficulty level is further based, at least in part, on the at least one skill level.

**67.** An apparatus of claim **64**, wherein the apparatus is further caused to:

cause, at least in part, a recommendation of at least one path to the at least one point of interest to cause, at least in part, an adjustment of the at least one application, the at

least one content item, or a combination thereof based, at least in part, on the at least one difficulty level.

**68.** An apparatus of claim **67**, wherein the apparatus is further caused to:

determine one or more searches for the at least one point of interest; and

cause, at least in part, a presentation of the recommendation based, at least in part, on the one or more searches.

**69.** An apparatus of claim **64**, wherein the apparatus is further caused to:

cause, at least in part, a presentation of at least one indicator via a user interface of the at least one device,

wherein the at least one indicator depicts, at least in part, a progression of the at least one difficulty level based, at least in part, on the proximity.

**70.** An apparatus of claim **64**, wherein the apparatus is further caused to:

cause, at least in part, a presentation of at least one link to the at least one application, the at least one content item, or a combination thereof in a user interface.

**71.** An apparatus of claim **64**, wherein the apparatus is further caused to:

determine that the at least one difficulty level substantially meets a threshold difficulty level based, at least in part, on the proximity; and

cause, at least in part, a presentation of a notification message.

**72.** An apparatus of claim **64**, wherein the apparatus is further caused to:

determine that the at least one application, the at least one content item, or a combination thereof has been at least partially or substantially completed at the at least one level of difficulty; and

cause, at least in part, a presentation of information associated the at least one point of interest.

**73.** An apparatus of claim **64**, wherein the apparatus is further caused to:

determine that at least one device has approached the at least one point of interest to within a threshold proximity; and

determine at least another difficulty level based, at least in part, on another proximity to at least another point of interest,

wherein the at the least another difficulty level is progressively based, at least in part, on the at least one difficulty level.
